Since 1976, Profilpas has been an industry-leading producer of finishing and edge-protection profiles. With two manufacturing plants, Profilpas has become one of the most well-known and trusted brands among building industry professionals looking for complementary flooring accessories and top-quality solutions. The variety and depth of Profilpas' product catalog range from profiles for wall and floor applications... to transition profiles, baseboards and expansion joints... to profiles for ceramic tiles... to trims for carpets and resilient floors, all designed for both residential and commercial applications. With more than 6,000 SKUs, Profilpas offers one of the most complete and extensive lines in the industry. Thanks to its 2022 acquisition by MAPEI, one of the world's leading manufacturers of chemical products for the building industry, Profilpas is now part of a global company that has 96 subsidiaries operating in 57 countries and 93 manufacturing plants in 36 nations.

SUPERIOR PRODUCTS

A Complete Range of Products

MAPEI produces the most innovative products for the construction market. More than 8,100 products globally (adhesives, sealants, mortars, admixtures, latex, etc.) are manufactured in MAPEI's plants, which produce the world's most complete range of building products. Diversified, high-quality chemical products – from powdered adhesives, to liquid and paste products, to polymers – are created to meet the needs of more than 78,000 customers around the world.

Quality Control

MAPEI is an ISO 9001-2000 certified company. Its products are produced according to exacting standards, strictly adhering to process and procedural guidelines with documented compliance. This rigid production format is vigilantly followed to ensure that every product is produced uniformly from batch to batch.

PROFESSIONAL SUPPORT NETWORK

Knowledgeable Sales Force

MAPEI offers the largest, most highly trained sales force within the industry to serve your needs for product application/installation recommendations.

Its sales representatives are focused on supporting you with product knowledge, product demonstrations, product information, marketing support materials and other relevant tools to help you generate sales.

Technical Expertise

An in-house Technical Services Call Center responds to customers' telephone inquiries with answers to installation challenges in real time. In addition, MAPEI can offer field support for job startups, product training and on-site problem resolution.

Customer Service Plus

MAPEI's standards for customer service are best-in-class. Our leadership includes such service innovations as:

- Customer-friendly, efficient processes.
- One-call resolution.
- Employee commitment to effective customer dialogue.

Innovative Research & Development

We have always been highly committed to this sector. Our research scientists work within a global network comprising 39 centers, with our Corporate Research Centre in Milan acting as a hub to coordinate the activities of all the other centers and as a central analysis laboratory. The United States has four centers, and Canada has one. All equipped with cutting-edge equipment, the centers collaborate continuously with universities as well as scientific and industrial research institutes.

The research and development laboratories also provide support for our Technical Services Division to help provide solutions for even the most complex requests from our clients. Working alongside these centers are our quality-control laboratories, which are present in all the MAPEI Group's production facilities.

Best-BackedSM Warranty Program

To bring it all together, MAPEI complements the industry's best products with simple, easy-to-understand requirements for a variety of warranty options.

SUSTAINABILITY

is built into everything we do

MAPEI's processes focus on sustaining the environment for today and tomorrow.
We call it "The 3 P's of MAPEI: People, Planet and Products"

PEOPLE

PLANET

PRODUCTS

MAPEI's corporate vision, including our Code of Ethics, has always included the philosophy of sustainability.

Our operational processes are designed to reduce our carbon footprint and maximize our environmental "handprint."

With many sustainable attributes and certifications, our products can contribute to a variety of green building standards and certification programs.

For more information about our sustainability commitment, visit www.mapei.com.

#HealthandtheEnvironment #MAPEIusa

A WORLDWIDE LEADER

Originally established in 1937, today MAPEI is a privately owned global corporation headquartered in Milan, Italy, with 98 subsidiaries in 59 countries and 106 plants in 42 nations. The company specializes in manufacturing chemical products for building, including waterproofing products, specialty mortars and admixtures for concrete, products to restore historic buildings, and decorative and protective coatings for concrete surfaces. In addition, MAPEI is the world leader in the manufacturing of mortars, grouts, adhesives and complementary products for installing all types of floor and wall coverings. MAPEI Corporation, the division responsible for supporting the North American markets, is based in Deerfield Beach, Florida, and employs over 1,530 team members – ranging from Manufacturing and R&D to Technical Services and Sales. MAPEI Caribe, based in Puerto Rico, has more than 65 employees. The Canadian subsidiary MAPEI Inc. supports those efforts with about 410 additional employees.

HOW TO ORDER

First, choose the **product's family and functionality** as listed in the Table of Contents (for example, "Cerfix, Proangle").

Then, determine the following elements:

- The desired shape
- The model
- The material
- The height

Finally, when placing the order, use the letters "PPS" followed by the product's corresponding 5-digit code.

Contact your local MAPEI distributor to place orders and for further information, visit www.mapei.com.

For pricing, shipping terms, product availability and local inventory, please contact MAPEI Customer Service at 1-800-42-MAPEI (1-800-426-2734).

External Corner Profiles

Cerfix™ Proangle™

Proangle in aluminum is a line of profiles for edging and protecting the external corners of ceramic coverings. Its L shape clearly outlines tile coverings, such as rectified porcelain stoneware. Available in different colors and finishes, Proangle can also be used as decorative element, creating refined and pleasant combination/contrast effects with a wide variety of coverings. ZQVNH/ boasts the certified antibacterial technology (according to the internationally recognized laboratory test JIS Z 2801:2000) that reduces the presence of the most dangerous bacteria up to 99%, thus ensuring the best hygiene over time.

Individually packaged

Profiles for Floors of Equal Height

This line of profiles allows the combination of different materials with elegance and simplicity, extending the boundaries of creativity in design.

Cerfix™ Proangle™

Proangle profiles are for finishing, protecting and decorating floors of same level in ceramic, marble, granite, wood and other materials. These profiles are also ideal as separation and decoration joints between floors made of different materials, as finishing and protection element for the edges of steps, platforms and worktops, and as perimeter profiles for the shaping of doormats. Proangle B in natural aluminum is particularly suitable for materials that require deep polishing, such as marble, resin and wood surfaces.

Cerfix™ Prodecor™

Prodecor and Prodecor DJ profiles are for finishing and protecting floors of same level in ceramic, marble, granite, wood and other materials. These profiles are also ideal as separation and decoration joints between floors made of different materials, as perimeter profiles for the shaping of doormats or as protection and finishing of platforms and ceramic steps. The visible thickness makes for an elegant separation element perfectly integrated into the floor.

Projoint™

Projoint T profiles are for separating, protecting and decorating same-level floors of ceramic, marble, granite, wood and other materials. They are also ideal for covering any imperfections due to cutting or installing floors made of different materials, and covering slight height differences (from 3/32" to 1/8", or 2 to 3 mm). These profiles are easy to install, thanks to the arrow shape that allows a perfect repair with sealants or adhesives.

Proclassic

Proclassic R profiles are specially designed as threshold covers and for hiding junctions and imperfections due to cutting or installing floors made of different materials. The rounded shape covers slight height differences (from 3/32" to 1/8", or 2 to 3 mm) between two different types of flooring. Repairs are particularly easy thanks to the option of using adhesive or screws.

Proclassic

Proclassic R profiles in stainless steel are particularly suitable for public spaces and for areas subject to frequent and heavy loads. The sparkle of polished stainless steel also matches modern floors and furnishings perfectly. Proclassic R profiles in polished brass are simultaneously classic and modern, and can be easily matched to handles, taps and other furniture accessories of the same material and finish.

Profiles for Floors of Different Heights

Ramp profiles for floors of different heights feature a sloping section that connects floors with varying thicknesses. These profiles are made from stainless steel, brass and aluminum, allowing different options for the target environment.

Cerfix™ Pronivel™

Pronivel NZS/ is a line of ramp profiles composed of an L shape that works as the shoulder and a ramp that is available in 2 widths. Together, these two components eliminate the step between floors of different thickness. The articulated connector enables many combinations as well as the installation of new flooring alongside the connector, even after the application of NZS/.

External Corner Profiles

Wall profiles are used to protect and decorate. We offer a variety of finishes and materials to suit different environments and needs.

Cerfix™ Proangle™ Q

Proangle Q in aluminum is a line of universal square-shaped profiles specially designed to edge and protect the external corners of ceramic coverings. The profiles can be also used for finishing worktops and platforms. ZQVNH/ boasts the certified antibacterial technology (according to the internationally recognized laboratory test JIS Z 2801:2000) that reduces the presence of the most dangerous bacteria up to 99%, thus ensuring the best hygiene over time.

Colors available on demand – minimum quantity 1,000 pieces

Cerfix™ Proangle™

Proangle in aluminum is a line of profiles for edging and protecting the external corners of ceramic coverings. Its L shape clearly outlines atile coverings, such as rectified porcelain stoneware. Available in different colors and finishes, Proangle can also be used as decorative element, creating refined and pleasant combination/contrast effects with a wide variety of coverings. ZQVNH/ boasts the certified antibacterial technology (according to the internationally recognized laboratory test JIS Z 2801:2000) that reduces the presence of the most dangerous bacteria up to 99%, thus ensuring the best hygiene over time.

Cerfix™ Protrim

Protrim in aluminum is a line of profiles with rounded shape, specially designed to edge and protect the external corners of ceramic coverings. Their shape also acts as symmetric finishing and helps to prevent accidents. RVH/ boasts the certified antibacterial technology (according to the internationally recognized laboratory test JIS Z 2801:2000) that reduces the presence of the most dangerous bacteria up to 99%, thus ensuring the best hygiene over time.

Cerfix™ Protrim

Protrim in stainless steel is a line of rounded-shape profiles specially designed to edge and protect the external corners of ceramic coverings and also recommended for floors, steps and countertops. The AISI 304 versions are recommended for food industries, kitchens, hospitals and outdoor spaces, while the AISI 316 versions are suggested for such difficult applications as swimming pools, spas and sites exposed to salt.

Cerfix™ Protrim

Protrim in coextruded PVC is a line of round-shaped profiles specially designed to edge and protect the external corners of ceramic coverings. Their shape also acts as symmetric finishing and helps to prevent accidents. Thanks to the special section with soft PVC inserts, these profiles absorb the micro-movements and tension of the wall coverings. Mass-dye colored and available in many colors, these profiles can be used in the most varied spaces.

Cerfix™ Probord

Stainless-steel Probord ILN are security profiles for the outside corners of wall tiles and can be combined with the Proround M profiles. They are recommended for the prevention of accidents and in environments where high hygienic safety is also required, such as kitchens, the food industry and schools. The version in AISI 316 stainless steel is suitable for swimming pools, spas and environments exposed to salt.

Shower Tile Trims

This extensive line of profiles is for glass-wall partitions and flooring installation in the shower area.

We offer an extensive line of profiles for glass shower walls. In this section, you will also find pre-sloped profiles designed to avoid undesirable oblique cuts on wall tiles in the shower area.

Glass Profile

Glass Profile is a line of stainless steel profiles designed to cover the difference in height of the surface with a 2% slope and create a flat surface with a modern and linear design. Two finishes are offered: Satin stainless steel and matte black color-coated stainless steel.

Glass Profile

Glass Profile GPS1/ is a stainless steel profile for the insertion of glass walls of floor-level showers. GPS1/ features a 2% slope on the shower's inner side, for a perfect aesthetic solution for the sloped surface.

Completing the profile's installation is GPS/6, the end cap for hiding the section of the glass wall.

Glass Profile

Glass Profile GPS2/ and GPS14/12 are stainless steel profiles for inserting glass walls on wall coverings. GPS2/ is simple to install, is suitable for tiles of any thickness and does not require drilling. GPS/6 is the end cap to complete the profile, to hide the visible section of the glass wall. GPS14/12 can be affixed directly onto the already installed wall covering.

Stair-Nosing Profiles

Protect and Prostep are two lines of stair-nosing profiles that offer protection, finishing and safety for commercial and residential applications.

Prostep™

Prostep SGA, SGI, SGN and SGK profiles are designed for the realization and protection of ceramic, marble and stone steps. Thanks to the rounded section, they give elegance to the steps. The versions made of chromium-plated brass and anodized aluminum are not recommended in case of intense foot traffic, whereas those made of stainless steel are particularly suitable for heavy foot traffic.

Internal Corner Profiles

These profiles fit the perimeter junction between floors and walls. These products ensure high hygienic efficiency in private and public environments such as hospitals, food industries, spas, swimming pools and industrial kitchens.

Cerfix™ Proround™

Proround M in aluminum is a connection profile between floors and walls. This curved profile eliminates 90-degree angles to avoid the collection of dirt and possible sources of bacteria, which also facilitates cleaning.

Cerfix™ Proround™

Stainless steel Proround M is a connection profile to be used in areas requiring heightened levels of sanitary protection (such as restaurants, swimming pools, spas, industrial kitchens and hospitals). Specifically, this product offers superior resistance to corrosion, making it ideal for areas subjected to higher chemical attacks and close to sea water.

Cerfix™ Proint

Proint PIA/ and PI/ are two line of profiles in aluminum and PVC, suitable as perimetral connection during the installation of the wall covering and the floor.

The use of Proint PIA/ and PI/ allows to avoid the use of silicone for sealing and, in addition to the aesthetic advantage, it guarantees a high hygiene over time.

The special sections of Proint facilitate the corner connection between the wall covering and the floor.

Cerfix™ Proround™

Proround B in aluminum or PVC is a line of perimeter connection profiles to be used between floors and walls, specially designed for application on already laid surfaces. These profiles are the best solution for renovations and for compliance with hygienic regulations. BLAH/ boasts the certified antibacterial technology (according to the internationally recognized laboratory test JIS Z 2801:2000) that reduces the presence of the most dangerous bacteria up to 99%, thus ensuring the best hygiene over time.

Cerfix™ Proround™

Proround B in stainless steel are perimetral connection profiles to be used between floors and walls, specially designed for the application on already-laid surfaces. These profiles are the best solution for renovations and to be compliant with hygienic regulations.

Stainless steel is particularly resistant to the attack of organic and inorganic agents and, therefore, it is suitable in spaces such as hospitals, food and chemical industries.

Projoint NZS is an aluminum expansion joint with high absorption. Thanks to its two interlocking parts, the joint can absorb movements of +/- 3/16" (5 mm) with articulated fins that permit tridimensional movements. This joint protects the edges of tiles and withstands pedestrian and vehicular traffic. NZS is also available as a joint cover when tiles are already installed (NZS/A), or as a side joint for industrial buildings (NZS/L).

Cerfix™ Procover

Procover Flex is a line of structural aluminum joint covers designed to withstand traction and compression. They withstand both pedestrian and vehicular traffic with rubber wheels (cars). Procover Fix is a line of flat joint cover profiles in aluminum for coplanar floors (GJA/) and perimeter joint cover profiles for the connection of floors and walls (GWA/), suitable to cover structural movements of expansion or compression of two different structures.

Profiles for Resilient Floors, Wood, Engineered Wood, Carpet and Carpet Tiles

Enjoy a full range of profile options for wood, laminate and LVT flooring. Several systems and professional solutions are available in various colors of anodized aluminum and in the exclusive durable film finishes, with the possibility of further customization thanks to Profilpas Digital System (PDS) technology.

Unisystem™ Plus

Unisystem Plus is a system for the installation of resilient flooring and carpet tiles from 1/4" to 7/8" (6.5 to 22.6 mm) in thickness. Composed of transition profiles for floors with the same or different heights, perimeter profiles and stair-nosing profiles, Unisystem Plus is easy to install and simple to remove. The system is composed of a top profile, an aluminum base and a fixing clip. After inserting the fixing clip in the top profile, just push the top profile to clip it to the aluminum base.

Adfix the aluminum base to the subfloor with screws or glue

Adjust the flooring to fit

Insert the clips in the top profile

Insert the top profile into the base

Adjust and level the cover by pushing it down

To place orders correctly, find the desired model, size and finish. Then place your order by using the letters "PPS" followed by the corresponding 5-digit code.

Profix Thin

Profix Thin is a system for the installation of thin resilient flooring 5/32" to 5/16" (4 to 8 mm) in thickness, made up of junction profiles for same-level floors (Z/4), connection profiles for different-level floors (C/4) and perimeter profiles (S/4). The system is composed of a PVC base and a top profile available in different finishes of anodized aluminum or covered with a durable wood-, stone- or concrete-effect film for matching floors perfectly.

Alfix 46

Alfix 46 is a professional system for the installation of LVT floors $5/32"$ to $1/4"$ (4 to 6 mm) in thickness. This system is characterized by top profiles in anodized aluminum, adfixed with a screw system on a natural aluminum base. Screws, included in the package, match the anodization in color and, once adfixed, integrate with the top profile.

Profilpas Digital System: No limits to imagination

You can choose from more than 400 standard durable decors to perfectly combine a profile or baseboard with the floor. We offer a wide selection for wood, stone and concrete decors, to meet every need. Just consult our PDS chain set to choose the best color that matches your needs.

But that's not all. Customization is literally limitless with Profilpas. Just provide us with a sample for creating any further decor, even a fantasy one!

This is possible thanks to Profilpas Digital System (PDS), the innovative digital printing technology of Profilpas to reproduce any decor on durable film, eliminating any limits on your imagination. The whole production process takes place in our factory, from the scanning to the printing to the applying of the film. Contact MAPEI Customer Service to learn more.

Metal Skirting Boards

Metal Line profiles, made of stainless steel and aluminum, come in wide variety of trendy styles and colors for residential and commercial environments.

Metal Line

Metal Line 90 is an aluminum baseboard, available in different finishes, that creates an elegant junction between the wall and the floor. The terminal is curved to adapt perfectly to the floor. Metal Line 90 is also available in white and black Trend Color Stone, two matte colors that perfectly match the most modern tile floorings. The baseboards can be curved using a standard bending machine.

90/10 silver anodized aluminum

Metal Line 90 white stone color-coated aluminum

Metal Line 90/6 silver anodized aluminum

PRO FLEX LINE

TREND
COLOR

Metal Line 90 can be curved by using a standard bending machine.

The self-adhesive version in height 4, 5, 7, and 10 is available on request, with a minimum order of 100 pcs.

RAL 9003, RAL 7038, RAL 8019, RAL 9006, RAL 9007 color-coated aluminum skirting boards are available on request, with a minimum order of 150 pcs. For other colors, please contact our sales department.

To place orders correctly, find the desired model, size and finish. Then place your order by using the letters "PPS" followed by the corresponding 5-digit code.

Metal Line

Metal Line 89 is an aluminum baseboard characterized by minimalist lines. Available in different finishes and heights, it outlines the space with simplicity and elegance. Affixed on the wall with a specialized adhesive, it perfectly hides the perimeter expansion gap of a floating floor, as well as having a decorative role. Metal Line 89 is also available in white and black Trend Color Stone, two matte colors that perfectly combine with the most modern flooring.

Metal Line

Metal Line 87/6 and 88/6 are two flush, recessed baseboards for plaster, plasterboards and other types of wallboards. Both are composed of two separate elements: A base in natural aluminum and an insert in silver anodized or matte white color-coated aluminum. Once installed, the baseboard integrates perfectly into the wall surface, outlining the perimeter of the space without limiting it. There are two phases of installation: The base element must be installed before finishing the walls, while the chosen insert must be placed after the flooring installation.

Metal Line 97/8 is an aluminum baseboard that measures 3-1/8" (8 cm) high and is specially designed for housing service cables. Its specific PVC-cable trunking, once affixed to walls with screws and dowels, also acts as a support for the baseboard. It is particularly suitable for renovations, as it avoids making new tracks for the running of cables. It is also simple and quick to install, using natural aluminum supports that allow easy access to the cables for maintenance.

Ancient gray, RAL 9003, RAL 7038, RAL 8019, RAL 9006, RAL 9007 color-coated aluminum skirting boards are available on request, with a minimum order of 150 pcs.

For other colors, please contact our sales department.

PVC Skirting Boards

Our range of PVC baseboards are designed to meet every technical and aesthetic need, suitable for both professional and DIY use. Some baseboards can be customized using the digital printing technology Profilpas Digital System.

PVC Line

PVC Line 8605 and 8606 are two skirting boards in co-extruded PVC, characterized by a rounded shape and a height of 2-3/4" or 70 mm. Both are composed of a core in foam PVC and a visible surface in colored rigid PVC to guarantee the best aesthetic result and color uniformity. 8605 can also be covered with durable film and can be further customized thanks to the digital printing technology Profilpas Digital System. 8505 and 8606 can be fixed to the wall with adhesive (PP/96) or nails. Moreover, they do not absorb water and are resistant to impact, wear and tear, UV rays and the products normally used for cleaning floors and wall coverings.

PVC Line

PVC Line 8608 is a baseboard in PVC foam, characterized by a round shape and covered with durable film. Available in several finishes, it can be further customized thanks to the digital printing technology Profilpas Digital System. 8608 can be affixed to the wall with adhesive (PP/96 or similar), nails or special fixing clips. PVC does not absorb water; does not contain formaldehyde; and is resistant to shocks, wear, UV rays and the most common cleaning products for floors and wall coverings.

PVC Line

PVC Line 148 is a baseboard for carpet and PVC flooring that is composed of a base in rigid PVC and a clip in soft PVC. Used as internal corner connection profile, it creates a curvature on the corner once the flooring has been installed. It also allows finishing and covering the extremities of the carpet or the PVC flooring, thus hiding any cutting inaccuracies. This profile is recommended for public spaces such as hospitals and schools.

Profiles for Balconies and Terraces

Protec is a functional and stylish line of profiles for the protection of terraces and balconies.

Cerfix™ Protec

Protec CPCV and CPCI are a series of edge profiles for protecting and finishing the outside edges of terraces and balconies. Available in color-coated aluminum and stainless steel, they have been designed with a protruding section and can be used with tile thicknesses up to 3/4" or 21 mm. They also guarantee the outflow of water from the floor, avoiding contact with the wall. In addition, Protec CPCV is available in the bendable version CPCVF, provided with a special cutout that allows the profile to be bent with a radius up to 3.28' or 1 m.

Cerfix™ Protec

Protec CPGV is a perimeter profile for protecting and finishing the outside edges of terraces and balconies. This profile is composed of a vertical part that facilitates the outflow of rainwater from the tiled surface and protects the border of the floor, and a sloping part equipped with holes for a further discharge of the water. This technical solution and the consequent drainage reduce the problems of freezing and thawing as well as unsightly efflorescence on tile grout. The profile can be used with tile thicknesses up to 1/2" or 12.5 mm.

Cerfix™ Protec

Protec CPEV and CPEI edge-reversible profiles are designed for protecting and finishing the outside edges of terraces and balconies. Available in stainless steel and color-coated aluminum, these profiles can be installed flush with the border or detached from it. They can be used with tile or marble at thicknesses of 3/8" to 1-1/4" (11 to 32 mm). The particular design is recommended to protect the stair nosing and sidewalk edge, hiding the connection between treads and risers.

Cerfix™ Protec

Protec CPHA and CPHV are edge profiles in anodized and color-coated aluminum for terraces, balconies and sidewalks. The shape allows the outflow of water, avoiding direct contact with the screed. Installed along the perimeter, these profiles can outline ceramic tiles and protect the border in many fields of use. They can be used with tile thicknesses up to 3/4" or 21 mm.

Protec CPLV is a line of perimeter profiles in color-coated aluminum for protecting and finishing the borders of outdoor raised floors, terraces and balconies. These profiles are composed of a drilled base CPLB to be screwed to the supports, or, as an alternative, a cut base CPLB/2 for installed tiles, and a visible profile to be fixed with adhesive, available in 3 different heights according to the floor thickness. There are also special accessories for the creation of external corners and junctions.

Materials and Characteristics

MATERIALS AND CHARACTERISTICS

The following information summarizes the main characteristics of the materials. Further information is available upon request of the product specifications.

NATURAL BRASS

Alloy CW624N UNI EN 12167:

The profiles are produced by extrusion. They have a good resistance to chemical agents and mechanical stresses. On the visible parts the brass naturally oxidizes to create a superficial glaze. The brass, when exposed to corrosive agents or high humidity, is subject to phenomena of high oxidation and can present superficial spots. Where necessary, it can be restored to its original state by using abrasives or specific polishing products.

POLISHED BRASS

Alloy CW624N UNI EN 12167:

The profiles are produced by extrusion and then mechanically polished. The visible surface must be protected from scratches and frictions. The resistance to chemical agents and mechanical stresses is good. On the visible parts the brass naturally oxidizes to create a superficial glaze. The brass, when exposed to corrosive agents or high humidity, is subject to phenomena of high oxidation and can present superficial spots. Where necessary, it can be restored to its original state by using abrasives or specific polishing products.

CHROMIUM-PLATED BRASS

Alloy CW624N UNI EN 12167:

The profiles are produced by extrusion and then chromed. They are resistant to ultraviolet rays, weathering and chemical agents. They are not suitable for applications in floors with intense mechanical stresses.

NATURAL ALUMINUM

Alloy of Al-Mg-Si thermally treated in conditions T6 (6060 T6):

The profiles are produced by extrusion and guarantee a fair resistance to atmospheric and chemical agents. The cement and its derivatives produce, if wet, alkaline substances that, acting on the surface, can corrode the metal (formation of hydroxide of aluminum). For that reason, the visible surface of the profile must be immediately cleaned from cement, glue and other materials used for joints.

ANODIZED ALUMINUM

Alloy of Al-Mg-Si thermally treated in conditions T6 (6060 T6):

The profiles are produced by extrusion and then anodized. They have a good resistance to atmospheric and chemical agents. The cement and its derivatives produce, if wet, alkaline substances that, acting on the surface, can corrode the metal (formation of hydroxide of aluminum). For that reason, the visible surface of the profile must be immediately and gently cleaned from cement, glue and other materials used for joints. Wear and pedestrian traffic could damage the surface (in cases of profiles laid on the floor) and remove the original anodized finish.

POLISHED ALUMINUM

Alloy of Al-Mg-Si thermally treated in conditions T6 (6463 T6):

The profiles are produced by extrusion and then mechanically treated and processed. They guarantee a fair resistance to atmospheric and chemical agents. The cement and its derivatives produce, if wet, alkaline substances that, acting on the surface, can corrode the metal (formation of hydroxide of aluminum). For that reason, the visible surface of the profile must be immediately and gently cleaned from cement, glue and other materials used for joints. Polished aluminum profiles are not suitable for floor applications.

COLOR-COATED ALUMINUM

Alloy of Al-Mg-Si thermally treated in conditions T6 (6060 T6):

The profiles are made by extrusion and then coated with a thickness of $\geq 80 \mu\text{m}$. They have a fair resistance to atmospheric and chemical agents while they do not have a good resistance to mechanical stresses that would damage the surface enamel; therefore they are not recommended for floor applications. For that reason, the visible surface of the profile must be immediately and gently cleaned from cement, glue and other materials used for joints.

FOILED ALUMINUM

Alloy of Al-Mg-Si thermally treated in conditions T6 (6060 T6):

The profiles are produced by extrusion in natural alloy. The wood decoration is obtained by foiling the aluminum profiles with a special film, resistant to wear, perfectly reproducing grains and colors of wood.

STAINLESS STEEL - AISI 430

This kind of stainless steel has a moderate resistance to corrosive agents. It is recommended exclusively for indoor use.

STAINLESS STEEL - AISI 304

This is extremely resistant to most chemical and atmospheric agents, lime, mortar, tile glue and common cleaning products. It is recommended for outdoor use, food processing plants, hospitals, etc.

STAINLESS STEEL - AISI 316

This is extremely resistant to most chemical and atmospheric agents, lime, mortar, tile glue and common cleaning products. Moreover it has a good resistance to chlorine and salt, and is particularly recommended for extreme conditions of use.

INSTALLATION WARNING

Even stainless steel can be damaged if not treated with proper precautions during the installation. In particular, pay attention to: keeping the profiles protected inside their individual packaging up until the installation. (This precaution allows to avoid the contamination with other ferrous materials during the transport.) Avoiding the direct contact with cleaning products for cotto tiles and marble, decalcifying agents and cleaners containing chlorine and its compounds. Be cautious about the gases of hydrochloric acid during the cleaning of special floors. After installation, proceed immediately with an accurate cleaning of the surface with plenty of water and the consequent drying.

MAINTENANCE WARNING

Frequent cleaning is essential to preserve the beauty of stainless-steel profile surfaces. Pay close attention to the treatment of the profiles' surface during the installation. Immediately after installation, clean by rinsing the surfaces accurately. Avoid the use of abrasive products that may scratch the profiles. Do not use cleaners containing chlorine or its compounds, such as bleach, muriatic acid and decalcifying agents. Do not use abrasive sponges or wire wools that may scratch the surface or leave rust stains.

CHROMIUM-PLATED STAINLESS STEEL - AISI 304 - (Profilpas design)

Offering a refined aesthetic value, this is suitable for wall coverings but not for floors: Cleaning maintenance should be done with sponges or soft and non-abrasive cloths as well as neutral detergents.

Rigid PVC

Vinyl compound of rigid PVC. Unleaded, anti-shock and nonflammable. Eco-friendly mixture with Ca-Zn salts.

Plasticized PVC

Vinyl compound of plasticized PVC. Unleaded and nonflammable. Eco-friendly mixture with Ca-Zn salts.

Foam PVC

Vinyl compound of foam PVC. Unleaded and nonflammable. Eco-friendly mixture with Ca-Zn salts

Co-Extruded PVC - Rigid/Rigid

Vinyl compound of rigid PVC. Unleaded, anti-shock and nonflammable. Eco-friendly mixture with Ca-Zn salts.

Co-Extruded PVC - Plasticized/Plasticized

Vinyl compound of plasticized PVC. Unleaded and nonflammable. Eco-friendly mixture with Ca-Zn salts.

Co-Extruded PVC - Rigid/Plasticized

Vinyl compound of rigid PVC: Unleaded, anti-shock and nonflammable. Eco-friendly mixture with Ca-Zn salts. Vinyl compound of plasticized PVC: Unleaded and nonflammable. Eco-friendly mixture with Ca-Zn salts.

Co-Extruded PVC - Rigid/Plasticized Anti-Mold

Vinyl compound of rigid PVC: Unleaded, anti-shock and nonflammable. Eco-friendly mixture with Ca-Zn salts. Vinyl compound of plasticized PVC: Unleaded, nonflammable and injected with biocide. Eco-friendly mixture with Ca-Zn salts.

Co-Extruded PVC - Foam/Plasticized

Vinyl compound of foam PVC: Unleaded and nonflammable. Eco-friendly mixture with Ca-Zn salts. Vinyl compound of plasticized PVC: Unleaded and nonflammable. Eco-friendly mixture with Ca-Zn salts.

CLEANING AND MAINTENANCE TIPS

MATERIAL	FINISHING	CLEANING AFTER INSTALLATION	MAINTENANCE
Aluminum	Anodized	Use of acid-based cleaners and not alkaline	Exclusive use of neutral cleaning products
Aluminum	Bril. polished	Use of acid-based cleaners and not alkaline	Exclusive use of neutral cleaning products
Aluminum	Bright polished copper	Use of acid-based cleaners and not alkaline	Exclusive use of neutral cleaning products
Aluminum	Bright polished titanium	Use of acid-based cleaners and not alkaline	Exclusive use of neutral cleaning products
Aluminum	Bright polished gold	Use of acid-based cleaners and not alkaline	Exclusive use of neutral cleaning products
Aluminum	Color-coated	Use of acid-based cleaners	Use neutral or alkaline detergents
Aluminum	Bright satin	Use of acid-based cleaners and not alkaline	Exclusive use of neutral cleaning products
Stainless steel	Polished	Use of acid-based cleaners without chlorine	Use neutral or alkaline detergents
Stainless steel	Inox AISI 316	Use of acid-based cleaners	Exclusive use of neutral cleaning products
Stainless steel	Sandblast	Use of acid-based cleaners only neutral	Use neutral or alkaline detergents
Stainless steel	Satin	Use of acid-based cleaners without chlorine	Use neutral or alkaline detergents
Brass	Natural	Use of acid-based cleaners only neutral	Exclusive use of neutral cleaning products

Brass	Polished	Use of acid-based cleaners only neutral	Exclusive use of neutral cleaning products
Brass	Chromium-plated	Use of acid-based cleaners	Use neutral or alkaline detergents
PVC		Use of acid-based cleaners and not alkaline	Exclusive use of neutral cleaning products

PROFILES' CHARACTERISTICS AND PACKAGING SELF-ADHESIVE PROFILES

Self-adhesive profiles are made of nontoxic, nonflammable and solvent-free hot-melt glues. Although these products are nonflammable, they should not be exposed to open flames. Product preservation is guaranteed when storage takes place in "normal" climatic conditions.

Glue deteriorates at temperatures over 194°F (90°C) and crystallizes at temperatures below 5°F (-15°C).

During the application, the temperature of self-adhesive profiles and the ambient temperature where profiles have to be installed should not be below 50°F (10°C).

Important: Self-adhesive profiles cannot be installed on friable supports, as a junction between two carpeted floors, or between PVC floors and wall coverings.

DRILLED PROFILES

Some of the profiles can be fastened using flat-head or round-head screws. Acceptable screw sizes are 1/8" and 9/64" (3 and 3.5 mm).

PACKAGING

The  means blister packaging.

"Individually packaged" means that the packaging is made for the single profile with a protective shrink-wrap film.

DIRECTIONS

Do not use aggressive chemicals, as they could stain the metals. In particular lime, mortar or tile glue cause scratches on the visible surface of profiles. Therefore it is necessary to clean these parts immediately after installing of the profiles. Please note that in the current catalog, due to printing limitations, the color shades can be slightly different from the actual colors.
